

Why hundreds of physicians choose us and what sets us apart from your average sleep lab...

Full Service. We are there at every step including initial consultations, diagnostic studies, various treatment options, and follow-ups. We believe that patient education is essential and is part of their treatment plan, so along the way we make sure they understand each step of the process.

Expertise. We are a physician owned & operated with our Medical Director and Founder being quadruple board certified in sleep medicine, pulmonary, critical care, and internal medicine.

Experience. We have years of experience and recognized as one of the first sleep disorder centers since our establishment in 2005 in the Bronx, Upper Manhattan, and Westchester.

Location. We have 2 convenient locations, both with accessible parking, all major bus and train lines.

Convenience. We keep it hassle free for our referring physicians and staff members with pre-authorizations and appointment setting services. Our dedicated staff does **all** the work! (All we need is a referral via fax, over the phone, or online)

Fast. We find it important to communicate with the referring physicians and patients so our dedicated staff will remind & educate patients as well report patient status to physicians. Detailed result reports are delivered within **24-72 hours** after sleep study is done. We are more than welcome to hand deliver reports.

Education. Over the top educational programs with-in and out of our main facility. We find it is essential to educate patients, physicians, and the community as a whole as sleep disorders go un-treated.

*For more questions or interested in learning more about our wide array of services please contact our Administrator, **Noman Sheikh (845) 422-2278** today.*
